Aws certified solutions architect practice exams answers sheet pdf

Copy snapshot from the latest snapshot of your RDS instance, select encryption during copy and restore a new DB instance from the newly encrypted snapshot. But it can be attached to any VPC peered with its belonging VPC. This option can meet the requirements. An internet gateway is an AWS component which sits outside of your VPC does not consume any resources from your VPC. Which of the following services do you need to call from AWS STS service after you authenticate with your on-premise? If the S3 bucket is in a different region than VPC, the request looks for a route with NAT Gateway or Internet Gateway. AssumeRoleWithWebIdentity D. B. You also have an ECS cluster that gets messages from the queue to do the batch processing. AWS DataSync B. Answer: C Option A is not correct. VPC endpoint might have a restrictive policy and does not contain the new S3 bucket. You need to ReceiveMessage from Dead Letter Queue for failed retries. AWS Lambda Answer: D Explanation: AWS Lambda is not supported directly as the CloudFront origin. Option C is incorrect: The Spread placement strategy is recommended when a number of critical instances should be kept separate from each other. Endpoints are virtual devices. Create an Elastic File System (EFS) and mount the file system in the instance. Your manager asks you how to improve the performance and availability of the application. Answer: B With Elastic Fabric Adapter (EFA), users can get better performance if compared with enhanced networking (Elastic Network Adapter) or Elastic Network Interface. Option B is incorrect: Because this option does not use cache. So, our expert team has curated a list of questions with correct answers and detailed explanations for the AWS Certification exam. You have not created VPC endpoint for SES service and configured in the route table. Option A is incorrect: This option may increase the throughput however it does not store cache. Create a case with AWS support to enable encryption for your RDS instance. However, email sending getting failed. Service Limits D. The reference is in . Visibility Timeout on the SQS queue is set to 10 minutes. This number could be vary. AssumeRoleWithSAML B. Preparing for the AWS Certified Solutions Architect Associate Exam? Option B is incorrect. DynamoDB is not mentioned in this question. In a Security Group, for a successful HTTPS connection, add an inbound rule with HTTPS type and IP range in the source. Once EC2 instances are launched, make encrypted EBS volume as root volume through the console. They are looking for a single digit latency fully managed database to store and retrieve conversations. AWS MediaPackage channel endpoint D. By default 1. Select the ASG and on the Automatic Scaling tab, add a step scaling policy to automatically scale-out/in at fixed time every week. Your target is not in service until it passes one health check. Option C is correct. EC2 security group outbound rules not allowing traffic to S3 prefix list. Number of objects in the S3 bucket. Let's see how many of these AWS Solutions Architect questions you can solve at Associate-level! Let's get started! You can download the aws solutions architect-associate exam questions pdf for the easy download and reference. When you are trying to make a request from VPC A to VPC B, the request fails. AWS SES is in sandbox mode by default which can send emails only to verified email addresses. AWS Redshift D. Which of the following AWS services would you recommend? A. You want to use an AWS service to store cache for frequently accessed content so that the latency is reduced and the data transfer rate is increased. Option A is CORRECT: Amazon FSx supports Lustre file systems and users pay for only the resources they use. Cross-origin resource sharing (CORS) defines a way for client web applications that are loaded in one domain to interact with resources in a different domain. Refer to for details. Destination bucket's default CORS policy does not have source bucket added as the origin. S3 bucket CORS configuration does not have EC2 instances as the origin. Fault Tolerance C. Launch the Lustre file system from AWS Marketplace. Option B is incorrect: The target tracking scaling policy defines a target for the ASG. Option D is not correct. The application resolves complex, compute-intensive problems and needs a high-performance and low-latency Lustre file system. AWS S3 bucket C. GetFederationToken C. For better performance of the application, both low network latency and high network throughput are required for the EC2 instances. When you use Amazon SES to receive mail, you can develop software solutions such as email autoresponders, email unsubscribe systems and applications that generate customer support tickets from incoming emails. However, you are not receiving the messages again during the rerun. 24) You have launched an RDS instance with MySQL database with default configuration for your file sharing application to store all DB transactional information. Create a new option group, attach it to the DB instance and change the setting. Option C is incorrect: Because the number of objects in S3 cannot determine if the ECS cluster should change its capacity. What could have caused this behavior? Option D is incorrect: The description in the option is inaccurate. 26) You have successfully set up a VPC peering connection in your account between two VPCs - VPC A and VPC B, each in a different region. How do I prepare for AWS Solution Architect exam? For Amazon FSx, there are no minimum fees or set-up charges. Can I pass AWS Solution Architect Associate? However, compare to the SysOps exam, it's easier. You have to use the SMTP service provided by AWS. Enable enhanced networking features in the EC2 instance. How would you configure this? A. He/she has created a subnet and wants to ensure no other subnets in the VPC can communicate with your subnet except for the specific IP address. Option D is not correct. For any successful message operations, you are deleting them from the queue. Configure CloudFront to deliver the content in the S3 bucket. You can associate an Elastic IP address with any instance or network interface for any VPC in your account. Number of containers in the ECS cluster. Port 80/443 is not allowed on EC2 instance's Security Group from the load balancer. Enable Cross-Region Replication to several AWS Regions to serve customers from different locations. Source bucket has a policy with DENY and the role used for replication is not excluded from DENY. Option B is CORRECT: Because EFA is the most suitable method for accelerating High-Performance Computing (HPC) and machine learning application. Launch all EC2 instances in a placement group using a Cluster placement strategy. When launching the EC2 instances, select an instance type that supports enhanced networking. 5) You are creating several EC2 instances for a new application. Create multiple Amazon S3 buckets and put Amazon EC2 and S3 in the same AWS Region. Yes. Option B is incorrect: Although users may be able to configure a Lustre file system through EBS, it needs lots of extra configurations, Option A is more straightforward. Option C is incorrect: Because the EC2 placement group does not support a Lustre file system. You need to run some shell scripts and perform certain checks connecting to the AWS S3 bucket when the instance is getting launched. Answer: B, C Security groups are stateful – if you send a request from your instance, the response for that request is allowed to flow in regardless of inbound security group rules. AWS Storage Gateway C. AWS Lake Formation D. Check its pricing in Amazon FSx for Lustre Pricing. 21) You have configured AWS S3 event notification to send a message to AWS Simple Queue Service whenever an object is deleted. So this option is not correct. However, when you are trying to send a request from EC2 to S3 bucket using AWS CLI, the request is getting failed with 403 access denied errors. Configure Elastic Fabric Adapter (EFA) in the instance. Which method is the most suitable? Which of the following options could not be a reason for this? So he/she created a new route table and associated with the new subnet. Not with an error "403 access denied". This will definitely help you. Incoming traffic is distributed across endpoints in AWS regions. 5 C. Every Friday, the traffic starts to increase, remains high on weekends and then drops on Monday. Launch an unencrypted EC2 instance and create a snapshot of the root volume. You can also try the free tests. They are using existing unused S3 buckets and had set up cross-region replication successfully. Answer: A In this scenario, the SQS queue is used to store the object details which is a highly scalable and reliable service. A route with the target as local cannot be deleted. CallerIdentity Answer: A 17) How many VPCs can an Internet Gateway be attached to at any given time? Here we've a list of 25 free AWS Solutions Architect Exam Questions and Answers for you to prepare well for the AWS Solution Architect exam. Remove associated, add/delete routes and associate again with the subnet. Your company has a successful web application deployed in an AWS Auto Scaling group. For failed operations, you are not deleting the messages. Option D is CORRECT: Because CloudFront caches copies of the S3 files in its edge locations and users are routed to the edge location that has the lowest latency. For example, you can send marketing emails such as special offers, transactional emails such as order confirmations, and other types of correspondence such as newsletters. Configuring an outbound rule for incoming connection is not required in security groups. AWS Solutions Architect Associate (SAA-C02) exam validates your knowledge and skills for Architecting and deploying robust and secure applications on the AWS platform using AWS technologies. Defining a solution with the use of architectural design principles based on customer requirements. Providing guidance for the implementation on the basis of best practices to the organization over the project lifecycle. Also, the practice questions play an important role in getting you ready for the real time examination. Option B is incorrect: Because memory usage may not be able to reflect the workload. AWS RDS is a managed service and the data at rest in all RDS instances are encrypted by default. Add another EBS volume with an encryption option selected during launch. Option D is incorrect: Because the number of containers cannot be used as a metric to trigger an auto-scaling event. Elastic IP Addresses D. Due to the nature of the traffic to the application, they would like to increase the number of connections to RDS instances. Create a Lustre file system through Amazon FSx. B. AWS DynamoDB B. You have created a new route table, added route to VPC endpoint and associated route table with your new subnet. In a Security Group, for a successful HTTPS connection, you must add an inbound rule and outbound rule with HTTPS type, IP range in source and destination respectively. Below is the snapshot of what's covered in the Whizlabs courses. To create a NAT gateway, you must specify the public subnet in which the NAT gateway should reside. Whizlabs offering 765 practice questions that are very detailed in the explanations would help you to pass the certification exam in the first attempt. Once the EC2 instances are launched, encrypt the root volume using AWS KMS Master Key. 9) Organization XYZ is planning to build an online chat application for their enterprise level collaboration for their employees across the world. Here we bring the AWS CHEAT SHEET that will take you through cloud Computing and AWS basics along with AWS products and services! 12) Organization ABC has a customer base in the US and Australia that would be downloading 10s of GBs files from your application. 27) Which of the following statements are true in terms of allowing/denying traffic from/to VPC assuming the default rules are in effect? Option A is incorrect: Because DataSync is a tool to automate the data transfer and does not help to improve the performance. Create a high-speed volume cluster in an EC2 placement group. Question states the peering connection was successful. 4) Your company has an online game application deployed in an Auto Scaling group. You have developed a retry mechanism which reruns the application every 5 minutes for failed ReceiveMessage operations. A subnet can have only one route table associated with it. Not very tough. The strategy can be selected when creating a placement group: Option B is incorrect: Because the public IP cannot improve network performance. Frequently Asked Questions (FAQs) How many questions are on AWS exam? AWS SQS deletes the message after it has been read through ReceiveMessage API B. Answer: C When you have a bucket policy which has explicit DENY, you must exclude all IAM resources which need to access the bucket. Configure a scheduled CloudWatch event rule to launch/terminate instances at the specified time every week. Answer: B Amazon SES is an email platform that provides an easy, cost-effective way for you to send and receive email using your own email addresses and domains. Login to RDS instance and modify database config file under /etc/mysql/my.cnf B. All instances should be launched in a single availability zone. Option C is not correct. D. A route with target "local" on the route table can be edited to restrict traffic within VPC. Configuring an inbound rule in a security group is enough for a successful connection due to its stateful nature. AWS Global Accelerator Answer: D AWS Global accelerator provides static IP addresses that are anycast in the AWS edge network. Cost Optimization B. Create a new parameter group, attach it to the DB instance and change the setting. Configure a scheduled action in the Auto Scaling group by specifying the recurrence, start/end time, capacities, etc. You are performing a ReceiveMessage API operation on the AWS SQS queue to receive the S3 delete object message onto AWS EC2 instance. These practice tests, which simulate the actual certification exam, will help you do so. Amazon DynamoDB Accelerator C. If it exists, the request goes through the internet to S3. An Elastic IP address is a static, public IPv4 address designed for dynamic cloud computing. AWS CloudFormation Answer: C E Option A is snapshot based data backup solution. How can this be achieved? AWS SES cannot send emails to addresses which are not configured as IAM users. Routes not configured in route tables for peering connections. You can launch the instance with unencrypted root volume and create a snapshot of the root volume. Option A is incorrect: Because with Elastic Fabric Adapter (EFA), users can achieve a better network performance than enhanced networking. No. As of now, only SysOps Certification Exam has the Hands-on Labs. Check the differences between EFAs and ENAs in . It does not improve the performance using cache. AWS Elastic Beanstalk D. Make a copy of the snapshot with the encryption option selected and CreateImage using the encrypted snapshot. Use this image to launch EC2 instances. Answer: A The Lustre file system is an open-source, parallel file system that can be used for HPC applications. Option C is incorrect: This option creates multiple S3 buckets in different regions. AWS RDS C. Which of the following options would you choose? A. Internet Gateway B. Anyone can pass the AWS Solutions Architect Associate exam with the proper preparation and practice using sample questions from Whizlabs. NACL must have an outbound rule defined for a successful connection due to its stateless nature. AWS doesn't officially announce the passing score, but these are based on the exam taker's experience. Read Now: Amazon Bracket 3) You host a static website in an S3 bucket and there are global clients from multiple regions. If it does not exist, the request gets failed with connection refused or connection timed out. The number of messages in the SQS queue. What could have caused this? They do not belong to a single VPC. Is AWS Solutions Architect Associate exam hard? Cross-region VPC peering is supported in AWS. Create a predefined target tracking scaling policy based on the average CPU metric and the ASG will scale automatically. The number of questions in the AWS Architect exam is around 60-70. Answer: B 15) You will be launching and terminating EC2 instances on a need basis for your workloads. It is a commonly known saying that no matter how well prepared you are, if you aren't familiar with the examination pattern, then you'll find it difficult to crack the exam. Thus, the consumer must delete the message from the queue after receiving it. Answer: C At any given time, an Internet Gateway can be attached to only one VPC. Read more here: For option A, Cross region replication cannot be enabled without enabling versioning. Use Instance user data for shell scripts. Option D is correct. The application attracts more and more global customers. Option A is CORRECT: The Cluster placement strategy can improve network performance among EC2 instances. Which method is the most suitable for the scaling policy? A. The queue size may change greatly depending on the number of incoming messages and backend processing speed. You need to plan the scaling actions for the Auto Scaling group. Read more here: 11) Which of the following statements are true with respect to VPC? So, here we've presented 27 free AWS Solutions Architect exam questions for the AWS associate certification exam. You are using AWS SES API to send emails from your EC2 instance to multiple users. Option C is incorrect: Because Elastic Network Interface (ENI) cannot improve the performance as required. Root volumes cannot be encrypted. AWS Database Migration Hub D. AWS certification training plays an important role in the journey of AWS certification preparation as it validates your skills in depth. Option D is incorrect: Because products in AWS Marketplace are not cost-effective. Answer: A 25) Which of the following is an AWS component which consumes resources from your VPC? Use Placement Groups and set "InstanceLaunch" state to trigger AWS Lambda functions. With an Elastic IP address, you can mask the failure of an instance by rapidly remapping the address to another instance in your VPC. Also Read: AWS OpsWorks 6) You need to deploy a machine learning application in AWS EC2. It can be detached from the VPC and be used for another VPC. Answer: D When a consumer receives and processes a message from a queue, the message remains in the queue. The same pattern we have followed in Whizlabs most popular AWS Certified Solutions Architect Associate Practice Tests so that you could identify and understand which option is correct and why. Try these AWS Solutions Architect Associate exam questions now and check your preparation level. There must be at least one route on the route table. 23) Your organization has an existing VPC setup and has a requirement to route any traffic going from VPC to AWS S3 bucket through AWS internal network. Policy attached to IAM user does not have access to remove routes. An EC2 instance is in different availability zones than load balancer. Subnet's IP CIDR block can be same as the VPC CIDR block. Note that these are not exam dumps, practice questions are real exam simulators that would help you to pass the exam in the first attempt. Which of the following options could be the reason? Elastic Load Balancer B. 13) Which of the following is not a category in AWS Trusted Advisor service checks? Add a new route to enable delete option on existing routes. Answer: B 19) Which of the following are not backup and restore solutions provided by AWS? A. A network ACL can be associated with multiple subnets. In a Network ACL, for a successful HTTPS connection, you must add an inbound rule and outbound rule with HTTPS type, IP range in source and destination respectively and ALLOW traffic. What could be causing the failure? Versioning is not enabled on the source and destination buckets. Due to security compliance, your organization wants you to encrypt root volume which is used to boot the instances. Select the Encryption option for the root EBS volume while launching the EC2 instance. Memory usage of the ECS cluster. Use AWS SDKs to horizontally scale parallel requests to the Amazon S3 service endpoints. So they have created a VPC endpoint for S3 and configured to allow traffic for S3 buckets. Option D is CORRECT: Check the AWS Global Accelerator use cases. The Global Accelerator service can improve both application performance and availability. In Amazon FSx, users can quickly launch a Lustre file system at a low cost. The route points to the CIDR block (or portion of the CIDR block) of the peer VPC in the VPC peering connection. Same as above, when the security group does not allow traffic, the failure cause will be 403 access denied. 22) You had set up an internal HTTP(S) Elastic Load Balancer to route requests to two EC2 instances inside a private VPC. Encryption is not enabled on the source and destination buckets. Option D is CORRECT: With scheduled scaling, users define a schedule for the ASG to scale. Details please check ♡ Option A is CORRECT: Users can configure a CloudWatch alarm based on the number of messages in the SQS queue and notify the ECS cluster to scale up or down using the alarm. Here is the list of practice questions offered by Whizlabs. What would AWS Database service you recommend? Aspired to learn AWS? Gateway VPC Endpoints C. However, Lambda can be invoked through API Gateway which can be set as the origin for AWS CloudFront. NAT Gateway Answer: D Option A is not correct. Launch a high-performance Lustre file system in Amazon EBS. Failed ReceiveMessage queue messages are automatically sent to Dead Letter Queues. Free AWS Certification Exam Questions While preparing for the AWS certification exam, you may find a number of resources for the preparation such as AWS documentation, AWS whitepapers, AWS books, AWS Videos, and AWS FAQs. But the practice matters a lot if you are determined to clear the exam on your first attempt. Email receivers will not be IAM users. Option A is incorrect: This option may work. C. Answer: D When launching an EC2 instance, the EBS volume for root cannot be encrypted. Start the RDS instance, it may take a while to start an RDS instance as existing data is getting encrypted. Launch EC2 instances in an EC2 placement group and select the Spread placement strategy. Answer: D CloudFront is able to store the frequently accessed content as a cache and the performance is optimized. They are horizontally scaled, redundant, and highly available VPC components that allow communication between instances in your VPC and services without imposing availability risks or bandwidth constraints on your network traffic. CIDR blocks of both VPCs might be overlapping. Stop the RDS instance, modify and select the encryption option. (choose multiple) A. You need to configure this file system in AWS at a low cost. Use Instance metadata for shell scripts. The passing score of the exam is around 70-75%. The correct method is creating a placement group with a suitable placement strategy. Option C is incorrect: Because AWS Lake Formation is used to manage a large amount of data in AWS which would not help in this situation. The target did not return a successful response code Answer: B If a target is taking longer than expected to enter the InService state, it might be failing health checks. Responses to allowed inbound traffic are allowed to flow out, regardless of outbound rules. When he/she was trying to delete the route with the target as local, there is no option to delete the route. You must also specify an Elastic IP address to associate with the NAT gateway when you create it. Which metric would you use to scale up/down the ECS cluster capacity? You are using Long Polling which does not guarantee message delivery. The performance and availability of the application are improved. Attach high-speed Elastic Network Interface (ENI) in the instance. In a Network ACL, for a successful HTTPS connection, add an inbound rule with HTTPS type, IP range in source and ALLOW traffic. Which of the following options will allow performing any tasks during launch? What could be the reason? The application you are developing involves sending traffic to AWS S3 bucket from VPC for which you planned to use a similar approach. Refer to for its introduction. Definitely, these AWS CSAA practice questions / dumps would have helped you to check your preparation level and boost your confidence for the exam. The performance of inter-instance communication is very critical for the application and you want to attach a network device to the instance so that the performance can be greatly improved. There is always a possibility that you happen to fail the examination even after reading all the available AWS documentation online. We, at Whizlabs, are aiming to prepare you for the AWS Solution Architect Associate exam (SAA-C02). The traffic of the application is predictable. The question states that cross-region replication has been successfully enabled. How many questions are on the AWS Solutions Architect Associate exam? They approached you to perform this activity on your MySQL RDS database. Amazon SQS doesn't automatically delete the message. Other options may help on the performance however they do not store cache for the S3 objects. Auto-assign a public IP when launching the EC2 instances. Answer: B, D Option A is not correct. The question states "403 access denied". However, you have to configure a target such as a Lambda function to perform the scaling actions. A security group's default outbound rule allows all traffic to go out from the resources attached to the security group. 7) You have an S3 bucket that receives photos uploaded by customers. VPC A security group default rules not allowing traffic to VPC B IP range. However, when files uploaded to the US bucket, they are not being replicated to Australia bucket. Option B is not correct. 1 D. In order to ensure that this doesn't happen, you have to be fully prepared and have a clear understanding of the subject matter. AWS Solutions Architect Associate Exam Questions AWS Certified Solutions Architect Associate exam is for those who are performing the role of solutions architect with at least one year of experience in designing scalable, available, robust, and cost-effective distributed applications and systems on the AWS platform. For more information about public and private subnets, see Subnet Routing. This strategy should not be used in this scenario. In this case, the request is not coming from a web client. 1) You are an AWS Solutions Architect. You have decided to use AWS Simple Email Service and configured from email address. You cannot add/delete routes when associated with the subnet. Option A is not correct. For them to have a better download experience, they decided to use the AWS S3 bucket with cross-region replication with the US as the source and Australia as the destination. Which of the following could be a reason? Option B is correct. It will help you discover and decide where you need to focus more and plan a preparation strategy accordingly. AWS Certified Solution Architect Associate Real Exam Format Exam Name: AWS Certified Solution Architect Associate Exam Duration: 130 Minutes Exam Types: Associate Passing Score: 70-75% Eligibility/Pre-requisite: None Validity: 3 Years Exam Code: SAA-C01 Exam Format: Multiple Choice Questions Number of Questions: 60-70 Questions Exam Fee: \$150 Renewal: Every 3 Years Exam Language: English, Japanese, Korean, and Simplified Chinese It is highly recommended that you pass the AWS Solutions Architect Associate examination before you become an AWS Certified Solutions Architect Professional, and this is where the AWS Certified Solutions Architect Associate practice tests play an important role. Once the snapshot is created, you can copy the snapshot where you can make the new snapshot encrypted. A subnet can have multiple route tables associated with it. Answer: D The correct scaling policy should be scheduled scaling as it defines your own scaling schedule. The scaling actions do not happen based on a schedule. Option C is incorrect: The step scaling policy does not configure the ASG to scale at a specified time. This is where practice tests play their role and show its importance. Moreover, with the help of practice tests, you can know the status of your preparation and where you lack. 2 B. When an object is uploaded, an event notification is sent to an SQS queue with the object details. Network Optimization Answer: D 14) Your organization is building a collaboration platform for which they chose AWS EC2 for web and application servers and MySQL RDS instance as the database. AWS Elastic Block Store B. Use AutoScaling Group lifecycle hooks and trigger AWS Lambda function through CloudWatch events. Whether Hands-on Labs in the Solutions Architect certification Exam? To send private IPv4 traffic from your instance to an instance in a peer VPC, you must add a route to the route table that's associated with your subnet in which your instance resides. 18) Your organization was planning to develop a web application on AWS EC2. Option D is incorrect: The Elastic File System (EFS) cannot accelerate inter-instance communication. After you've created a NAT gateway, you must update the route table associated with one or more of your private subnets to point Internet-bound traffic to the NAT gateway. However, the application's performance is impacted. Answer: A The Cluster placement strategy helps to achieve a low-latency and high throughput network. How can you achieve this? However, one of the target EC2 instance is showing Unhealthy status. Answer: A, C Option A is correct. What is passing score for AWS? With CORS support, you can build rich client-side web applications with Amazon S3 and selectively allow cross-origin access to your Amazon S3 resources. This enables instances in your private subnets to communicate with the internet. 16) Your organization has an AWS setup and planning to build Single Sign-On for users to authenticate with on-premise Microsoft Active Directory Federation Services (ADFS) and let users log in to the AWS console using AWS STS Enterprise Identity Federation. Application admin was tasked to perform AWS setup required to spin EC2 instance inside an existing private VPC. Due to security compliance, your organization wants to encrypt all the databases and storage on the cloud. 8) You are planning to build a fleet of EBS-optimized EC2 instances for your new application. This practice exam questions are very similar to the practice questions in the real exam format. Network ACLs are stateless, responses to allowed inbound traffic are subject to the rules for outbound traffic (and vice versa). IAM user of configured from email address does not have access AWS SES to send emails. 2) Your team is developing a high-performance computing (HPC) application. When you compare to Cloud Practitioner exam, it's harder. When the VPC IP CIDR blocks are overlapping, you cannot create a peering connection. ECS is ideal to perform batch processing and it should scale up or down based on the number of messages in the queue. AWS S3 bucket is in a different region than your VPC. Cross-region peering is not supported in AWS B. These are created by certified experts. Which option is the most appropriate to improve the performance? A. Buying exam dumps or brain dumps are not a good idea to pass the exam. Because Amazon SQS is a distributed system, there's no guarantee that the consumer actually receives the message (for example, due to a connectivity issue, or due to an issue in the consumer application). The ping path does not exist on the EC2 instance. Option B, AWS Storage Gateway provides multiple solutions for backup & recovery. If you are planning to prepare for the AWS architect certification, you can start with going through these free sample questions created by Whizlabs team. If you have any questions about our exam questions, please contact our support at Option D can be used as a Database backup solution. AWS Aurora Answer: A Read more here: Read more here: 10) When creating an AWS CloudFront distribution, which of the following is not an origin? A. 20) Organization ABC has a requirement to send emails to multiple users from their application deployed on EC2 instance in a private VPC. Modify setting in the default options group attached to the DB instance.
